

End Beam:

Description:

The end beam is a complete driving unit for overhead crane traveling, which is connected with the crane main beam. This end beam is also with box girder design with motor, reducer, wheels as a piece of a full set equipment.

Advantages:

- 1、The crane main beam girder can be connected with the end beam by welding or strength bolts. There are bolt holes available for bolts connection.
- 2、According to different wheel pressure, this end carriage can be fitted with different size wheels with diameters from 150 to 500mm. The wheel has good wear resistance.
- 3、Driving mechanism adopt soft start motor, which is safe and reliable, gear motor driving mechanism is also available.

Specification:

Work Load	customized
Length	1.2-6m
Warranty	1 Year
Power Supply	380V,50HZ,3-Phase or Customized
Control method	Wireless Remote Control

Application:

The end beam is used for the crane traveling, it is one of the main supporting parts of the bridge crane and gantry crane.
